A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 27, 2003 has been entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 41-60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dube et al and Takemori et al.

Dube et al disclose a composition comprising whey protein, xylitol, a gum, flavorants, and a multitude of other additives (see entire patent, especially claims 20, 25, and 26).

Takemori et al disclose a composition comprising xylitol, whey protein concentrate, dietary fiber, flavorants, and other conventional components (see entire patent, especially claims 13 and 14).

The claims differ as to the addition of specific additives and percents.

Applicant attaches no criticality to the conventional additives claimed and at most they are seen to be no more than a matter of choice and well-within the skill of the art.

Art Unit: 1761

In the absence of a showing of criticality, the percents claimed are seen to be no more than a matter of choice and at most are seen to be optimization, see *In re Boesch* 205 USPQ 215.

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use the claimed percents and additives in that of Dube et al and Takemori et al because the use of well-known additives for their art-recognized purpose and the manipulation of percents is conventional in the art.

Attention is invited to *In re Levin*, 84 USPQ 232 and the cases cited therein, which are considered in point in the fact situation of the instant case, and wherein the Court stated on page 234 as follows:

This court has taken the position that new recipes or formulas for cooking food which involve the addition or elimination of common ingredients, or for treating them in ways which differ from the former practice, do not amount to invention, merely because it is not disclosed that, in the constantly developing art of preparing food, no one else ever did the particular thing upon which the applicant asserts his right to a patent. In all such cases, there is nothing patentable unless the applicant by a proper showing further establishes a coaction or cooperative relationship between the selected ingredients which produces a new, unexpected, and useful function. *In re Benjamin D. White*, 17 C.C.P.A. (Patents) 956, 39 F.2d 974, 5 USPQ 267; *In re Mason et al.*, 33 C.C.P.A. (Patents) 1144, 156 F.2d 189, 70 USPQ 221.

Applicant's arguments filed August 27, 2003 have been fully considered but they are not persuasive.

Applicant argues that prior art does not teach a dietetic food composition, that Takemori aims to reduce lactose content, and that there is no motivation to combine the references.

Art Unit: 1761

The prior art teaches the claimed components in an edible composition as claimed by Applicant. Applicant does not claim lactose.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the prior art is directed to xylitol/ whey protein compositions.

In the absence of unexpected results, it is not seen how the claimed invention differs from the teachings of the prior art. Applicant's claims are drawn to a combination of known components which produces expected results, see *In re Kerkhoven* 205 USPQ 1069 and *In re Gershon* 152 USPQ 602.
